Dear Parents and Students,

We are excited about this school year's Science & Engineering Fair and we hope you are too! The Science & Engineering Fair Committee's mission is to create a space for Bush students to showcase their deep-seated passion for scientific curiosity, or to construct an original solution of a local or global problem.

The Bush Science & Engineering Fair is a perfect occasion to present and demonstrate a child's natural curiosity. While the Science & Engineering Fair is optional for grades K-6th, it is an exceptional platform to share and showcase an innovative and unique project. This is especially true for 5th and 6th-grade students because they have the opportunity to enter the District Fair and possibly the State Fair. Parents, please encourage your child to take part in this wonderful opportunity.

There are two types of project processes a student can choose from 1) The Scientific Method or 2) The Engineering Design. If your child would like to participate in Bush's Science & Engineering Fair this school year, please sign below and have your child return it to his/her teacher. Once the slip is received, your child's teacher will provide further information.

Sincerely,
The Science & Engineering Fair Committee

I give my child ____________________ permission to participate in the Bush Elementary Engineering & Science Fair.
