

Add a QR Code to Smart Page

Select “**Edit Page**” from the Architeck toolbar at the top of the page.

When the screen refreshes, you will see lightly shaded blocks with the words “**Add content...**” on your page. To begin editing, simply click in any one of the boxes.

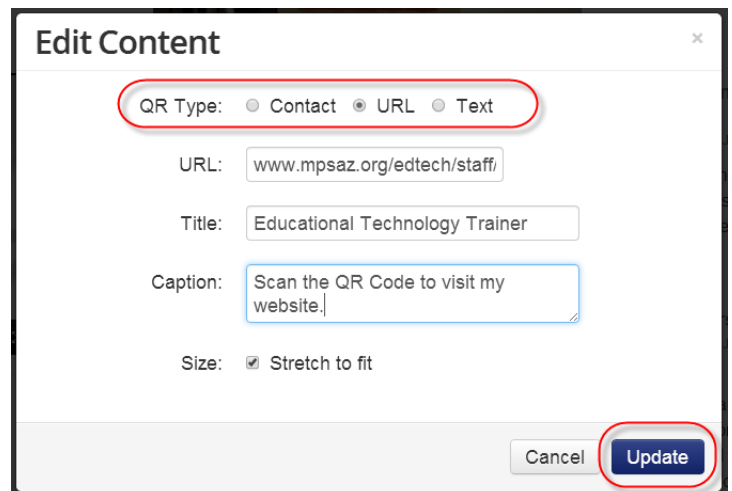

In the **Add Content** window, select “**Media**” and then select “**QR Code.**”

Select “**Create.**”

In the **Edit Content** window, you have several options for the **QR Type**. In this example I have chosen URL to take the end-user to my website.

Fill in the information and then select “**Update.**”

The QR Code now appears on your Smart Page. An end-user can scan the code from a phone or mobile device using a QR Reader. They will be taken to the website you entered in the URL address.

Be sure and select “**Publish**” from the Architeck toolbar at the top of the page to save your work.

*Please note that you can also have Architeck Smart Page create a QR Code for you from within the **User Profile** content area. This will be addressed in the **User Profile** tutorial.*
