

# A REVIEW OF 4 WAYS TO CREATE VIDEO PODCASTS

***Congratulations on taking the first steps to implementing video podcasts in your classroom!***

In the first session of “Podcasting 102: Delivering Content with Video Podcasts”, we went over four different ways to get video podcasts onto your website. On this little review sheet, we will review each of these.

*Note that you will need to have a video feed page in Architeck in order to post video podcasts. If you need assistance with setting up your video feed page, please visit the video tutorial located at [http://www.mpsaz.org/architeck/help/video\\_feed\\_page/creating\\_a\\_video\\_feed](http://www.mpsaz.org/architeck/help/video_feed_page/creating_a_video_feed) (Only 1 minute 47 seconds)*

Record via Quickstream  
Webcam Required

## 1. Creating video podcasts using Quickstream.

- Go to your video feed page and make sure you're logged in to Architeck
- Click on the “Create Video” link at the top of your screen 
- Type in the title and description for the video and click “Continue” 
- Click “Record via Quickstream” and click “Allow” for camera and microphone access and record away!
- Click “Publish” and you're done!

## 2. Creating video podcasts using a webcam and Windows Movie Maker.

- Open Windows Movie Maker
- Choose the option “Capture from video device” in the Capture Video task on the left of the screen.
- We then record our combined audio and video clip of ourselves.
- The clip appears in our WMM (Windows Movie Maker) collection and we drag it down to the storyboard or timeline.
- Under the Edit Movie task, we can click on “Make titles or credits” and create an opening slide (title slide) and a closing slide (credits).
- Remember to save your project!
- At this point we can create a completed movie file capable of being uploaded to Architeck and viewed on other computers. Click “File” > “Save Move File...” and follow the prompts.
- Once the movie finishes exporting, it can be uploaded to your Architeck page!

### 3. Create video podcasts by narrating a pre-recorded video clip

- a. Get video by downloading it from a digital camera, recording with a webcam, or using the clip we used in class, available at <http://www.mpsaz.org/edtech/programs/podcasting/resourcesforpodcasting>
- b. Import the video into WMM and drag to the timeline or storyboard.
- c. In timeline view, put the play head at the beginning of the video and click the microphone to create a narration (after clicking the microphone icon, follow the on-screen prompts).
- d. Stop recording narration when you're done and edit as needed.
- e. Remember to save your project!
- f. At this point we can create a completed movie file capable of being uploaded to Architeck and viewed on other computers. Click "File" > "Save Move File..." and follow the prompts.
- g. Once the movie finishes exporting, it can be uploaded to your Architeck page!

### 4. Create video podcasts by converting a PowerPoint to video

- a. Open a PowerPoint presentation
- b. Click "Save As..." and change the "Save as type" to JPEG/.jpg.
- c. All your slides are converted to .jpg images and saved to a folder in the designated location.
- d. In WMM, click "Import pictures", and find the images (.jpg's) from your PowerPoint, select them all, then click "Import". They will now appear in your collection window.
- e. Select your images and drag them to your timeline or storyboard.
- f. Click an image and slide the edge of each to lengthen or shorten the duration of each slide.
- g. Either import audio or narrate audio and fine tune the length of each slide's duration.
- h. Add any transitions, credits, etc.
- i. Remember to save your project!
- j. At this point we can create a completed movie file capable of being uploaded to Architeck and viewed on other computers. Click "File" > "Save Move File..." and follow the prompts.
- k. Once the movie finishes exporting, it can be uploaded to your Architeck page!

### 5. Hybrid! Try combining any of the above techniques for "differentiated podcasting"!

*For example, a title slide, webcam intro, PowerPoint video with a closing video interview!*

For more details on any of the above processes, or for tips and tricks regarding podcasting, try the ever-growing tutorials list located at:
